

Health E-chat (Team **Twookya**)

....Inspire to save life

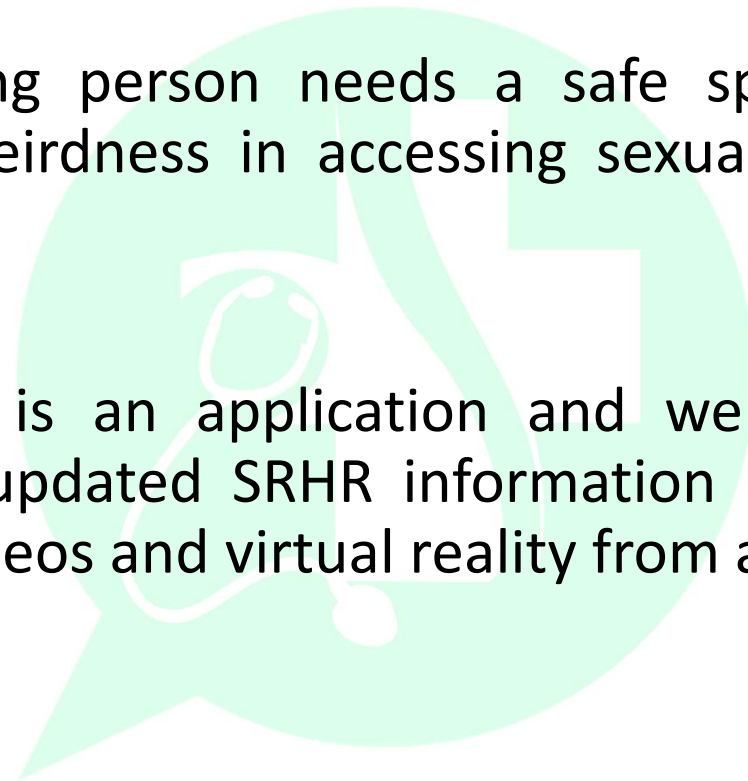

Health E-Chat

The Problem

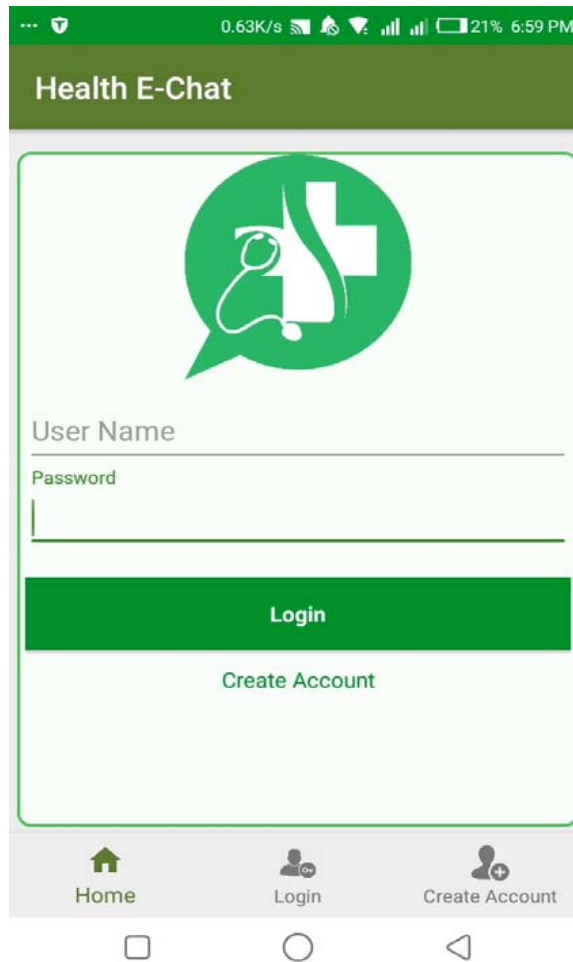

- Perpetual lack of **EFFECTIVE** Sexual Reproductive Health & Rights information and services characterised by presence of text information and unopenness among this vulnerable group between 12-24yrs.
- 136 new HIV infections every day occur in Uganda among adolescent youth and young women in the age bracket 12 to 24 yrs.(UNAIDS 2017).
- 25% of all pregnancies in Uganda are teenage with most associated with poor outcomes.(UHDS 2016).
- Youngest jaja of 27years in Uganda is in Butaleja District.

Value Proposition

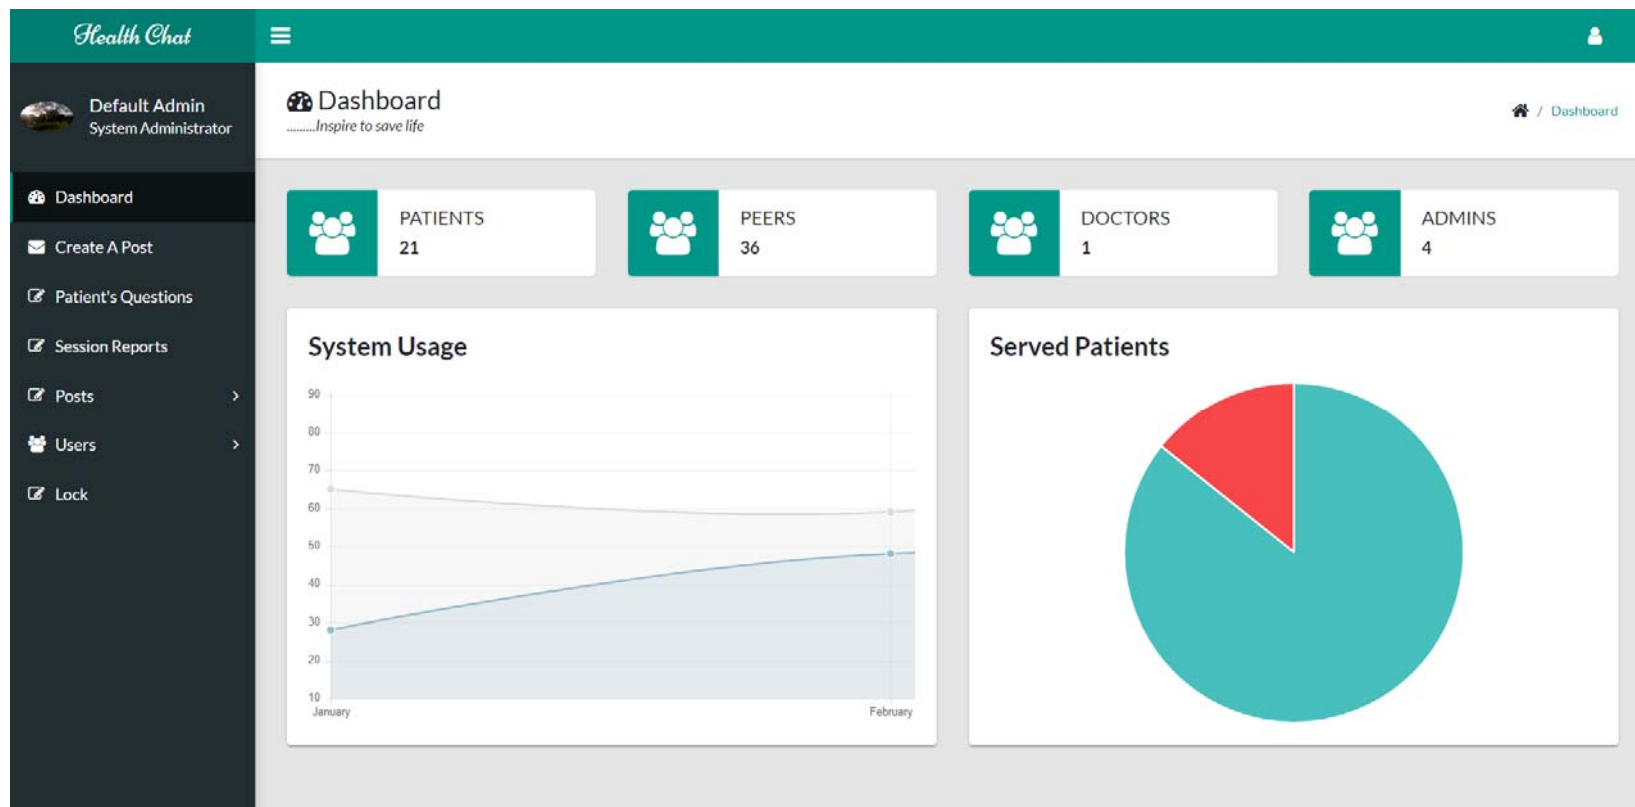

- Everyone young person needs a safe space that is friendly and removes all weirdness in accessing sexual and reproductive health information.
- Health E-chat is an application and web platform that provides accurate and updated SRHR information in form of pictures, audio, animations, videos and virtual reality from a qualified health worker.

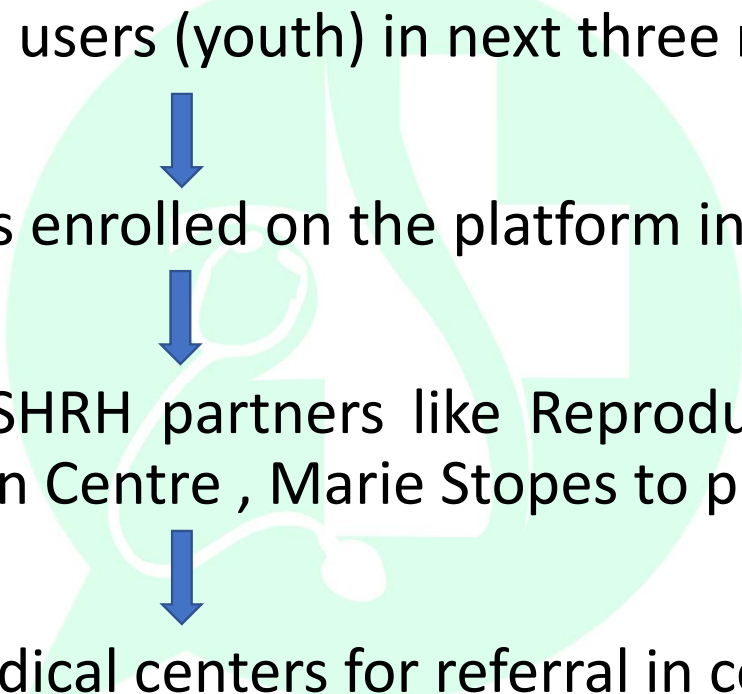

How it works

Current Status & Accomplishments

Financial projections and Key metrics

- Enroll 1000 end users (youth) in next three months.
 - Have 10 doctors enrolled on the platform in next three months.
 - Acquire three SHRH partners like Reproductive Health Uganda, IDI, Aids Information Centre , Marie Stopes to plug in the platform.
 - Enroll three medical centers for referral in communities.
